Ram-Disk

RAM-DISK

Imagine a disk drive like the 1541 or 1571 only many times faster. This is RAM-DISK. RAM-DISK organises all that hidden RAM under the ROMs as a soft disk drive. Once loaded, RAM-DISK responds to all the usual disk commands such as LOAD, SAVE, OPEN, CLOSE etc and behaves exactly like a floppy drive. The only difference is that everything happens much faster. RAM-DISK is modelled on the AMIGA RAM-DISK and takes no memory away from BASIC.

Use the COPY command to move files from a physical disk drive to RAM-DISK and vice versa. At the end of a session all the files held on RAM-DISK can be backed up onto floppy disk with a single command.

For most applications, including all BASIC applications, no special commands or knowledge are necessary. RAM-DISK does however provide certain additional commands aimed at making the best use of the memory available. You can instruct RAM-DISK to give you more blocks free by using as much or as little space as you wish anywhere in memory. RAM-DISK can also be driven from machine code.

Free Amiga style desktop utilities

When you look at the directory of your RAM-DISK you will see two programs already there and ready to use.

Alarm Clock

A genuine multi-tasking alarm clock. Once loaded the clock display stays on your screen and runs simultaneously with other software. You can set the time, set alarms and move the display around the screen simply by moving the cursor to the clock and selecting pull-down menu options.

Calculator

Just like the Amiga calculator. Instantly loaded at any time from RAM-DISK for those quick calculations. All the usual calculator functions.
